American Academy of Pediatrics (AAP) - Idaho Chapter

Going home with a new baby is exciting, but it can be scary, too. Newborns have many needs, like frequent feedings and diaper changes. Babies can have health issues that are different from older children and adults, like diaper rash and cradle cap.. Your baby will go through many changes during the first year of life. You may feel uneasy at first.

Infant and Newborn Care: MedlinePlus

Breastfeeding and human milk are the normative standards for infant feeding and nutrition. Given the documented short- and long-term medical and neurodevelopmental advantages of breastfeeding, infant nutrition should be considered a public health issue and not only a lifestyle choice. The American Academy of Pediatrics reaffirms its recommendation of exclusive breastfeeding for about 6 months ...

Every infant presents uniquely and has certain individual needs. While the vast majority of infants transition without problems, some present with anatomical, physiological, infectious, and developmental issues that must be addressed. The assessment of the newborn should begin with obtaining a health history and include the initial Apgar assessment, the transitional assessment during the ...

Pediatric Surgery Handbook for Residents and Medical Students

Sudden infant death syndrome (SIDS) is defined as the sudden death of an infant younger than 1 year that remains unexplained after a thorough case investigation, including performance of a complete autopsy, examination of the death scene, and a review of the clinical history. Cases that fail to meet this definition, including those without a ...

Sudden Infant Death Syndrome: Practice Essentials

Breastfeeding, also known as nursing, is the feeding of babies and young children with milk from a woman's breast. Health professionals recommend that breastfeeding begin within the first hour of a baby's life and continue as often and as much as the baby wants.

With a potentially huge public health impact, new AAP-endorsed guidelines outline a new approach that promises to reduce the risk of peanut allergy. Estimated to affect 1%-2% of children, peanut allergy often is severe and lifelong. The new guidelines recommend early introduction of peanut protein ...

New guidelines detail use of "infant-safe"™ peanut to

Oral rehydration therapy (ORT) is a type of fluid replacement used to prevent and treat dehydration, especially that due to diarrhea. It involves drinking water with modest amounts of sugar and salts, specifically sodium and potassium. Oral rehydration therapy can also be given by a nasogastric tube. Therapy should routinely include the use of zinc supplements.

Oral rehydration therapy - Wikipedia

This is the first clinical practice guideline from the American Academy of Pediatrics that specifically applies to patients who have experienced an apparent life-threatening event (ALTE). This clinical practice guideline has 3 objectives. First, it recommends the replacement of the term ALTE with a new term, brief resolved unexplained event (BRUE).
